

LANDING COIN

WHITEPAPER

Version 1.0 | 29 August 2026

Everyone is going to the moon. We are landing.

No moon. No promises. Just landing.

Document status

This is the project whitepaper for Landing Coin (LANDING). It is an informational project document, not a MiCA crypto-asset white paper, prospectus, investment recommendation or promise of future value. LANDING is a speculative memecoin and may lose all or substantially all of its value.

Contents

01	Executive summary
02	Project identity and principles
03	Token and technical architecture
04	Token allocation and transparency
05	Liquidity and market access
06	Project structure and responsibilities
07	Community role and future experiments
08	Flight Plan
09	Transparency and communications policy
10	Risk factors
11	Official verification links
12	Disclaimer

Purpose of this document

This whitepaper consolidates LANDING's current public information into one reference document. It describes what exists today, what does not exist, and the direction the project may explore. Where market conditions, venues or wallet balances change over time, the official website and on-chain records remain the current source of truth.

01 Executive summary

Landing Coin (LANDING) is an independently created memecoin on Solana Mainnet. It deliberately rejects the standard memecoin script of guaranteed destinations, exaggerated utility and manufactured traction. The project's premise is simple: a memecoin can remain openly speculative while still being technically transparent, operationally disciplined and honest about what it is.

LANDING has a fixed supply of 404,000,000 tokens. Mint authority and freeze authority are disabled. Token allocations and project wallets are published, liquidity is available on Solana through an Orca pool, and the project publicly documents its current structure and development direction.

LANDING does not claim to solve a technical problem, represent equity, guarantee returns or provide a predetermined path to value. It is a cultural and community experiment built around transparency, irony and organic growth. If the project develops further, future initiatives are intended to be announced only after they become real enough to document.

Core proposition

Same risk. Different attitude. LANDING does not try to make a memecoin look like a revolution. It tries to make the memecoin proposition more explicit, more verifiable and less dependent on fictional promises.

Key facts

Field	Current information
Name / symbol	Landing Coin / LANDING
Network	Solana Mainnet
Token standard	SPL Token (classic)
Decimals	6
Total supply	404,000,000 LANDING
Mint authority	Disabled
Freeze authority	Disabled
Metadata	Mutable; separate metadata update authority retained
Project status	Live and tradeable

02 Project identity and principles

The crypto market often rewards attention before substance. Memecoins amplify that tendency: communities are frequently presented as “strong” before they exist, utilities are announced before they are built, and success is marketed before it has happened. LANDING was created as a deliberate inversion of that pattern.

The LANDING way

- No guaranteed destination: no price targets, return predictions or claims of inevitable success.
- No fictional utility: LANDING is a memecoin today and is described as such.
- No manufactured traction: the project rejects fake holders, wash trading, artificial volume and manufactured community metrics.

- Announce what exists and make facts verifiable: milestones are documented when real, while supply, authorities, allocations, wallets and liquidity information are published for independent checking.

This philosophy does not reduce the financial risk of holding LANDING. It changes the way the project communicates that risk and the standards it applies to its own public claims.

03 Token and technical architecture

LANDING is deployed on Solana Mainnet as an SPL Token (classic). The token architecture is intentionally simple. There is no additional minting capability and no freeze authority capable of freezing token accounts.

Parameter	Value
Official mint	DLGLMB3imJqnAwKjxY8ZFXoF7CPfTbCNL3j3Ag5M5vGZ
Decimals	6
Total supply	404,000,000 LANDING
Mint authority	Disabled
Freeze authority	Disabled
Metadata status	Mutable
Metadata update authority	125kgmJxWnzFTvxtapngumyQiqbEdDqgZ8DMbby6sivw
Metadata URI	https://gateway.irs.xyz/HMjDFXazvaWKVaGciDckXymf5t66RrpS8XbVEvKVrhHp

What “mutable metadata” means

The metadata update authority can update descriptive token metadata. It does not restore mint authority, increase the fixed token supply, or create a freeze authority. The retained metadata authority is disclosed as part of the project's technical transparency.

Independent verification

Technical deployment / release: [MAINNET-DEPLOYMENT.txt on GitHub](#)

04 Token allocation and transparency

The 404,000,000 LANDING supply was allocated at launch across five disclosed categories. These allocations sum to 100% of total supply.

Allocation	LANDING	Share
Community	202,000,000	50.0000%
Treasury	141,400,000	35.0000%
Liquidity Reserve	39,000,000	9.6535%
Creator	20,200,000	5.0000%
Initial liquidity allocation	~1,400,000	~0.3465%

Published allocation wallets

Allocation	Published owner address
Community	CBPwwUZrDQThyM6a54shKPywvpTyYQQ2Ng7FWPZPM88
Treasury	3JA9uuNqr5tqBxGP9sQTRTPtwmPAR2KxmJyXyietrQwS
Liquidity Reserve	34hUkC1XVGMHX64txhfTh7rDBMhtScK8cpCcP54u17vZ
Creator	4fUtkW2LEZxLt2tgPJ9BitViNBqR3AUy58hyG81Q41hg

Associated token accounts are also published on landingcoin.fun. Wallet balances can change as tokens are used for their disclosed purpose; the addresses allow observers to verify those changes directly on-chain.

05 Liquidity and market access

LANDING has live liquidity on Solana through an Orca Whirlpool / Splash Pool. Jupiter routing is available. Additional trading venues may be evaluated individually, but a listing is not treated as success by itself: the project prioritizes sustainable access over accumulating inactive exchange tickers.

Item	Reference
Orca Whirlpool / Splash Pool	GyCQYByuUEMEWErDX6xFSpKC3stsfXJRDsFy4fQb1prq
Liquidity lock status	Not locked
DEX routing	Jupiter routing available
Current trading venues	See landingcoin.fun for the current list

Liquidity disclosure

The project publicly states that liquidity is not locked. This is a material risk factor and should not be interpreted as equivalent to locked or permanently inaccessible liquidity. The Liquidity Reserve is separately disclosed as an allocation intended to support liquidity-related needs.

Market conditions can change rapidly. This document intentionally avoids quoting a token price, daily volume, holder count or pool value because those figures become stale. Current market data should be verified through independent explorers and market trackers.

06 Project structure and responsibilities

LANDING is currently an independent, single-creator project and is not operated by a separate incorporated company.

Role	Current responsibility
Michele Scalini - Founder & Project Operator	Project direction, token allocation administration, public communications and overall project coordination.
NOVA - Digital Executive Assistant	Research, organization, documentation, communication workflows and project coordination support. No custody of funds, wallets, private keys or signing authority.
Future roles	Development, community, communications and partnership functions may be added only if project growth justifies them. They are not current employees or departments.

The project publishes its current structure as it exists rather than presenting possible future contributors as if they already formed a conventional organization.

07 Community role and future experiments

The Community allocation represents the largest share of supply. Its long-term purpose is intentionally not pre-filled with fictional utility. LANDING's direction is to use project reach and resources only when there is something concrete worth supporting, with transparent criteria defined before resources are committed.

What may be explored

- Community-shaped initiatives connected to the blockchain world.
- Experiments, prototypes, tools or content that fit LANDING's identity and can be documented transparently.
- Ways for active community members - "Landers" - to contribute without turning participation into coordinated shilling.
- Practical uses for the Community allocation where purpose, criteria and execution are publicly explained.

What is not promised

- No guaranteed grants, funding rounds, products or services.
- No guaranteed governance rights or token-holder voting system.
- No guaranteed revenue, dividends, yield or economic return.
- No claim that future experiments will necessarily create demand or value for LANDING.

08 Flight Plan

LANDING uses a Flight Plan instead of a deadline-driven roadmap. Phases are described by status and direction rather than fictional delivery dates. A phase changes status only when the progress behind it actually exists.

Phase	Status	Direction
Touchdown	Completed	Token deployed on Solana Mainnet; fixed supply; mint/freeze authorities disabled; allocations and wallets published; Orca liquidity and Jupiter routing live; website and official channels launched.
Build the Runway	In progress	Expand reputable visibility; evaluate sustainable trading venues; maintain accurate documentation; develop editorial/ecosystem visibility; grow without fake holders, wash trading or coordinated shilling.
Bring More Landers Aboard	Direction	Convert attention into an active community through recurring content, community-created material, aligned collaborations and participation that does not depend on shilling.
Beyond the Landing	Direction	Evaluate practical uses for Community resources; invite proposals; define transparent criteria; support selected blockchain-related experiments; document completed initiatives.
The Lander Era	Long-term direction	Build a recognizable community identity and culture in which genuine participation, creativity and long-term presence matter more than constant price-chart attention.

No fictional ETA

The Flight Plan is a direction, not a promise. LANDING does not publish dates solely for marketing and does not guarantee listings, partnerships, utilities or future milestones.

09 Transparency and communications policy

LANDING's public communications are intended to distinguish clearly between verified facts, current work, possible directions and speculation. The project does not claim that transparency eliminates risk; transparency is used so that risk is easier to inspect.

- On-chain claims should be independently verifiable where possible.
- Current project structure should be described as it exists today.
- Listings and partnerships should be announced after they exist, not presented as guaranteed future events.
- Paid promotion or distribution must not be presented as organic community activity.
- Artificial volume, wash trading, fake holders and manufactured engagement are inconsistent with the project's stated operating principles.
- Errors in public information should be corrected when identified.

10 Risk factors

LANDING is highly speculative. Anyone acquiring LANDING should be able to tolerate a total loss. The following list is not exhaustive.

Risk	Description
Market risk	LANDING may experience extreme volatility, low liquidity, wide spreads and rapid price declines. There is no guarantee of a liquid market.
Early-stage risk	The project has a limited operating history, a developing community and no assurance that adoption will grow.
Concentration risk	Large published allocations exist in Community, Treasury, Liquidity Reserve and Creator wallets. Movement or sale of significant balances can affect market conditions.
Liquidity risk	Liquidity is not locked. Liquidity levels may change and may become insufficient for orderly trading.
Single-operator risk	The project is currently operated by one founder rather than a larger incorporated organization. Operational continuity therefore depends significantly on one individual.
Technical / network risk	LANDING depends on Solana, wallets, smart-contract infrastructure, exchanges, DEXs and third-party services that may fail, be exploited, change policies or become unavailable.
Regulatory risk	Laws and regulatory treatment of crypto-assets can change across jurisdictions and may restrict trading, promotion, access or project activities.
Listing risk	A current or future trading venue may reject, restrict, suspend or delist LANDING. No exchange listing is guaranteed.
Metadata risk	Token metadata remains mutable under the disclosed metadata update authority, although mint and freeze authorities remain disabled.
No utility / value guarantee	LANDING is a memecoin. It has no guaranteed utility, cash flow, yield, redemption right or mechanism that guarantees market value.

Users should verify the mint address before interacting with LANDING. Project impersonators, fake tokens and fraudulent support accounts may exist. The project will never ask users for seed phrases or private keys.

12 Disclaimer

This document is provided for general informational purposes only. It does not constitute investment, financial, legal, tax or other professional advice; an offer or solicitation to buy or sell securities, financial instruments or crypto-assets; a prospectus; or a guarantee of future performance.

LANDING is a speculative memecoin. Its market value may be highly volatile and may fall to zero. No statement in this document should be interpreted as a promise of profit, return, liquidity, exchange listing, future utility, partnership, development milestone or continued project operation.

This project whitepaper is not presented as a crypto-asset white paper prepared pursuant to Regulation (EU) 2023/1114 (MiCA). Regulatory obligations may vary depending on jurisdiction, activity and future project development. Users are responsible for determining whether acquiring, holding or trading LANDING is lawful and appropriate in their jurisdiction.

Third-party services, wallets, exchanges, explorers and market trackers are independent from LANDING unless explicitly stated otherwise. References to them do not imply endorsement, guarantee or continuing availability.

Information in this document reflects the project at Version 1.0 dated 29 August 2026. On-chain records and the official website should be consulted for subsequent changes.

NO MOON. NO PROMISES. JUST LANDING.
